

7th International Workshop on LIGHTWEIGHT CRYPTOGRAPHY FOR SECURITY & PRIVACY LightSec 2026

October 11, 2026

Royal Seginus Hotel, ANTALYA, TÜRKİYE

LightSec 2026, as an affiliated event of *CHES 2026*, promotes and initiates novel research on security, privacy, and trust issues related to applications that fall under the umbrella of lightweight security. The term “lightweight” refers not only to conventional constraints on metrics such as computational and communication complexity, execution time (both throughput and latency), power, energy, area, memory capacity, and bandwidth, but also to constraints concerning the sizes of ciphertexts, public and private keys, and the compactness of proofs in zero- knowledge protocols.

LightSec 2026 enthusiastically welcomes papers on algorithms, protocols, techniques, and their secure and efficient implementations for applications utilizing advanced cryptographic algorithms such as homomorphic encryption, zero-knowledge proofs, secure multi-party computation, cryptographic consensus protocols in blockchain applications, threshold cryptography, and post-quantum cryptography.

The conference proceedings will be published in **Springer-Verlag’s LNCS series**.
